

Dear nationals and residents

Muscat Campaign for Elimination of Aedes aegypti

Your detection and proper actions with mosquito breeding sites will limit its reproduction :

Empty water containers and animals and birds drinking pots and clean them with brush every 5 days.

Get rid of collected water from Air conditioner and split units with regular changing of water in water coolers and other areas of water collection.

Changing of water in swimming pools, fountains, and planting pots every 5 days.

Proper coverage of water tanks.

Get rid of old tires, empty painting containers, and spoiled house dishes.

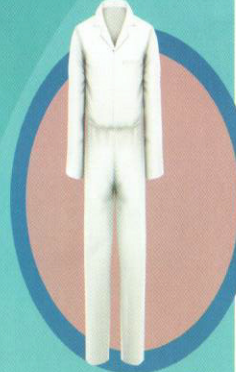

Dear nationals and residents

Muscat Campaign for Elimination of Aedes aegypti

Adhering to personal protective measures will protect you against getting bitten by mosquitoes:

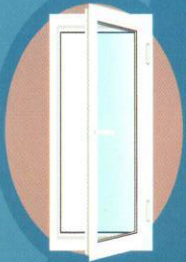

Wearing clothes with long sleeves that covers maximum part of the body.

Using mosquito repellent on the exposed part of the body (caution with history of allergy, read product leaflet)

Using narrow window nets.
